

SOLAR PROTECTOR FOR VEHICLE

Abstract

A protector to cover part of the roof, the windshield and lateral windows of vehicles. A covering preferably manufacture of sun protector cloth, forms a principal body (1) that covers part of the roof and the windshield. Lateral sections (4) that start at the lateral upper ends of said principal body. They are of greater diameter, more specifically, at the principal lower vertex, extending or projecting curved sections (5) which are joined vertically by means of a velcro closure (6). A monolithic body is formed which allows the covering of the lateral windows (7) and thereby avoiding the penetration of the sun's rays.
